Minerals Energy OandGdata BENM.docx

Please find attached the compiled information from 5th floor on BENM (note: I did not receive any additional sources as attachments). We also received production numbers from Ted McDougall (below; already incorporated into Drive):

Reported annual production (cubic yards) from the subject pit for the initial contract period (2/3/11 - 2/3/16) is as follows:
2011 - 16,000
2012 - 12,000
2013 - 31,622
2014 - 44,444
2015 - 2,914
Total - 106,980

Reported production to date since contract was renewed :
(3/31/16 to date) - 4,630 cubic yards

Note: The total cumulative production for the initial 5-year contract term was verified by topographic survey. The latest production report was received 2/10/17 so there has been additional production not yet reported.

All-

Please find attached Word versions of the Executive Summary and Data Responses for Bears Ears National Monument and the supporting documents. (Thank you, Tyler and others for doing such an amazing job!)

These are all located in the DOI's Google Drive folder, but only a few BLMers have access in Drive.

We are still waiting on some information from the 5th floor, the grazing program, and review by External Affairs.

Please bring any issues to our attention during the conference call tomorrow morning (UTSO folks can gather in Monument Room A).

Thanks!

Regards,

Allison Ginn

Call for Data Related to Review of National Monuments under EO 13792 (April 26, 2017)

1. Information on activities permitted at the Monument, including annual levels of activity from the date of designation to the present. (Designation date for BENM is December 28, 2016 information is for 2nd quarter FY17)

a. Energy annual production of coal, oil, gas and renewables (if any) on site; amount of energy transmission infrastructure on site (if any)

- There are no producing oil and gas wells and no coal developments in BENM. While no new energy production will be permitted, valid existing rights were protected under the Proclamation.

b. Minerals annual mineral production on site

- There are no active mining operations in the BENM. There is one commercial mineral materials site.....While no new mineral production will be permitted, valid existing rights were protected under the Proclamation.

(b) (5) DPP

3. Information on activities occurring during the **5 years prior to designation**

a. Energy annual production of coal, oil, gas and renewables (if any) on site; amount of energy transmission infrastructure on site (if any)

- There was no oil and gas production within the area now bounded by the BENM in the five years prior to designation. There was 63,777 acres of land within the Bear Ears nominated for the 2014 through 2018 Lease Sales, but all the parcels derived from nomination were deferred since they were within the anticipated San Juan MLP.

b. Minerals annual mineral production on site

4. Information on activities that likely would have occurred annually from the date of designation to the present **if the Monument had not been designated**

The answers to this question would be highly speculative and is best answered with qualitative (rather than quantitative) data. As BENM was designated less than 5 months ago, there has been very little change in the management of activities since the date of

designation.

- c. Energy annual production of coal, oil, gas and renewables (if any) on site; amount of energy transmission infrastructure on site (if any)
 - . Due to the short timeframe since designation, projections are not available and would be insignificant in statistical terms.
- d. Minerals annual mineral production on site
 - While no new energy production will be permitted, valid existing rights were protected under the Proclamation. Due to the short timeframe since designation, projections are not available and would be insignificant in statistical terms.
